

Response Paper 20030801

This is a short document meant to serve as an example of how L^AT_EX can be used to create bibliographies. We don't have the MLA citation package installed as of July 14, 2003, but we should soon. Right now, these citations are in the basic plain format. If you need more style files installed - say for instance, you need Chicago style citations - email help@image.ufl.edu to request that we add that package. We may or may not be able to do it, but we can try.

This is just a small sample of how LaTeX and BIBTeX work.

Comparative Analysis with Previous Texts
